

Why Have a Security Compliance Program?

First off, what is compliance? To put it simply, it's what you do to follow industry standards, frameworks and laws for cybersecurity and data protection. It's the processes and operational procedures that make your business more secure.

in **2023**,
the global average cost
of a data breach was
4.45M USD*

How does compliance benefit my organization?

Protects your business

A solid compliance program improves your security measures, which in turn reduces risks. Being compliant with industry standards like HIPAA, GDPR, or SOC 2 means you'll be more aware of violations that could put your business at risk.

Builds trust with your customers

Everyone wants to know their data is in safe hands. Customers will be pleased to know you're taking extra precautions. You'll also be more appealing to prospective customers as they assess the risks of doing business with you.

Strengthens your security operations

No more spreadsheets or disorganized data. We'll create a single source of truth for your security operations and alert you when you need to take action, so you can be proactive with compliance.

Reduces cybersecurity premiums

With cybersecurity insurance on the rise, having a robust security compliance program is win-win. Your provider can easily audit your business to see you're serious about cybersecurity, so you can get lower premiums.
